php|architect's_Zend_PHP_5_

Postby **davey@pixelated-dreams.com** on Thu Apr 03, 2008 2:51 am

First Edition

Page 7:

reads "If you need to output data through a function, you can use print() instead". Person reporting comme manual makes it clear that print is not really a function but rather a language construct" So perhaps we just i the wording.

Page 12:

top line reads "...want to convert to enclosed in brackets"... this should read "want to convert to enclosed in |

Page 17:

should read \$a = int('Test'); //\$a==0 ... echo ++\$a; //outputs 1. Otherwise the output will read "Tesu" becau: incrementing

Page 19:

lines 2,3: If both bits are either set or unset, the resulting bit is unset

Page 26:

check versus table in the manual <http://www.php.net/manual/en/language.operators.php>

Page 29:

on while loops: should say "they allow you to perform a series of operations until a condition evaluates to fals

Page 34:

the line "if(\$oldErrorHandler) will cause an error... need to put global \$oldErrorHandler at the beginning of fu myErrorHandler(). Also change to \$oldErrorHandler = set_error_handler('myErrorHandler');

Page 50:

should read "giving the key for the specific element..."

Page 52:

-- if the two arrays had common elements that also share the same string keys or that have numeric keys (different) they would only appear once in the end result. This isn't true and should be changed to "if the two common keys (either string or numeric) they would only appear once in the end result"

Page 53:

`var_dump ($a==$c); //should be false`

Page 54:

should be `echo array_key_exists('a', $a);`

Page 54:

should be `echo in_array (2, $a);`

Page 55:

typo - "note how key key association..."

Pages 56-57: use of `reset()` is misleading here: only if the `$array` is passed by-reference to the function, it will be necessary to be reset; otherwise we'll find a brand new reset array inside the function by default.

Page 57:

should be `$array = array(1,2,3); ... end ($array);` to work with code right after it

Page 67:

"Push and pull" should be "push and pop"

Page 68:

should read "if you intend to use an array as a queue, you can add elements to the beginning and extract them by using the `array_unshift()` and `array_pop()` functions".. Also should change the code appropriately

Page 76:

"Here's an escaped backslash - \ - " ... should read "...backslash -\\""

Page 77:

`echo srtr('abc','a','1'); //(instead of strstr)`

Page 79:

`strncasecmp` instead of `strcasencmp`

Page 81:

Line 1 should be - "You can use the `strspn()` function..."

Page 87:

should read "A sign specifier (a plus or minus symbol) ... "

Page 88:

`printf("%d", $f); //prints 123`

Page 92:

should read "the function returns integer 1 if the match is successful"

Page 98:

should read "Contrary to popular belief, POST is not an inherently more secure way to ..."

Page 99:

2nd par, should read "As you can see, the data has been encoded and appended to the end of "..."

Page 99:

should be [direction] not [dir]

Page 99:

Under the <!--FORM submitted with POST--> section, the code says <input type="password" name = "pas single quote at the end of pass

Page 107:

\$data should be \$date

Page 109:

Check the "setcookie delete" description

Page 122:

the examples should read public \$var1, \$var2, \$var3 instead of public var1

Page 123:

static public function baz() :: public should come before static

Page 123:

output will display "Hello World... Notice: Undefined property

Page 141:

This chapter says it reviews PDO and database connectivity but it never does... we need to either write some take this part out

Page 143:

"one-to-one... correspond to every row in the parent"... should read "each row in the parent"

Page 147:

"suppose we wanted to create a unique index"... but then an ordinary index is created

Page 149:

Ender\'s Game should be escaped with 2 single quotes as such Ender\'s Game

Page 153:

sql statement is incomplete, only 2 of 3 tables are joined. Publisher table is missing from the joins

Page 158:

if (is_null(self::\$_singleton)) {self::\$_singleton = new DB(); - conflicts with the "the getInstance() method, whether the static property \$_connection has been initialized and, if it hasn't sets it to a new instance of DB

Page 164:

delete this line: function seek(\$key)

Page 165:

class myData implements Iterator (needed capital I on iterator)

Page 165:

\$_myData and \$_current needs to remove the underscore

Page 178:

Parsing XML Documents - text is confusing here

Page 184:

\$dom->load('library.xml');

Page 184:

should read DomDocument::loadHTMLFile() (capitalize HTML)

Page 185:

DomXPath should read DomXPath

Page 204:

should read " the worst that can happen"

Page 207:

last line, 2nd par - should read "While setting register_globals to Off is the preferred approach"

Page 214:

Reads "Since 1=1 is always true and - begins..." - should read "Since 1=1 is always true and -- begins"

Page 228:

SEEK_CURRENT should be SEEK_CUR

Page 231:

reads "a directory which has the same file as an existing file" - should read "a directory which has the same existing file"

Page 231:

should read "Note that, normally, only the last directory"

Page 231:

should read "Checks if the path is executable"

Page 234:

"Stream contexts are created using stream_create_context()" - should read "Stream contexts are created using stream_context_create()"

Nice list, i would add two more:

Page 11:

"When converted to a number or a STRING, a boolean becomes ... 0 otherwise". Compare this to

<http://www.php.net/manual/en/language.types.string.php>

saying:

Boolean FALSE is converted to "" (the empty string).

Page 147:

"isbn ...references book (id)" should say "references book (isbn)"

Adam

Postby **phareous** on Wed May 14, 2008 4:38 pm

Page 5, info block:

"which the parser considers this perfectly legal"
remove "this"

Page 10, 2nd paragraph:

"you should consider using a the arbitrary"
remove "a"

Page 49, 2nd paragraph under 'Enumerative vs. Associative':

"without the need to create intermediate values to cover ever possible key in between"
change "ever" to "every"

Page 60, main paragraph:

"we are able to convert each each of the array's values to uppercase"
remove extra "each"

phareous

Postby **partner** on Sat Oct 11, 2008 3:44 pm

Page 133, first paragraph

should read : When instantiating Some_Class, __autoload() is called and passed "Some_Class" as its argument. The function then replaces the underscores with forward slashes, append ".**php**" and includes the file using require_once().

Consequently the function `__autoload` should be (note addition of `."php"`) :

```
function __autoload($class)
{
// Require PEAR-compatible classes
require_once str_replace("_", "/", $class)."php";
}
$obj = new Some_Class();
```

Postby **partner** on Fri Oct 17, 2008 2:05 pm

Page 177,

<publisher>G. Allen **&** Unwin</publisher>

(otherwise `simple_xml_load_file()` and `simple_xml_load_string()` at the end of page 177, will report an error)

Page 52

"Note how the the resulting array"

remove the extra "the"

Page 180

"What this example doesn't show is that you may also iterate through the the children"

remove the extra "the"

Page 193

"This creates a new SOAP client using the the WSDL file provided by Google."

remove the extra "the"

Page 219

"or include, it checks the the location of the file. If it exists within the directory tree"

remove the extra "the"

Page 227

```
if (!file_exist ("counter.txt")) {  
throw new Exception ("The file does not exists");  
}
```

should read

```

if (!file_exists("counter.txt")) {
throw new Exception ("The file does not exists");
}

```

Page 228

\$f = fopen('file.csv');
fopen() should have a mode as second parameter !

My Apologies for locking the thread.

I've now deleted about 500 spam posts from it on several occasions, and would rather not go through all tha

If you have found more for the book please email one of the authors, or me (paul at phparch dot co) add it to the thread.

(davey + ben you know how to get ahold of me)
[paul reinheimer](#) - senior trainer for **php|architect**

the opinions expressed are my own, when they're wrong, inflammatory or silly take it up with me rather tha
